

M.I.C.S.[™] – The Modular Interlocking Case System

Create Your Own Free-Standing Work Station in Seconds

Patented M.I.C.S. hardware connects case lids with case bodies to create an instant workstation with sturdy, fold-out legs.

The Anvil Modular Interlocking Case System (M.I.C.S.[™]) is a unique patented system for case lid attachment. Almost any application can be created with a few easy assembly procedures to turn clamp-on-lid design cases into field workstations.

Case lids, which secure to the case side with an attachment catch, feature folding legs which are used to create a self-contained workstation.

The M.I.C.S. option is available on most Anvil A.T.A. cases.

Industry Applications

- ▲ Trade show
- ▲ Field broadcast
- ▲ Touring sound systems
- ▲ Field and emergency medical
- ▲ Field military
