

## ANVIL "WEDGE" PLASMA MONITOR CASE

*Protect Your Displays with Anvil Cases*

The unique patented "wedge" design discourages the common practice of "flipping" cases on their tops or sides in transport, thereby increasing the life expectancy of the screen itself.

Based on Anvil's ATA series of cases, this unique design is offered in 3/8" and 1/2" thickness with ABS, fiberglass or aluminum laminates.

Foam construction is such that all pressure points and padding makes contact with the frame of the unit only.

Heavy-duty casters are standard.
